The treatment in the dental clinic

Before the tooth whitening

Examination and inspection of caries, fillings, etc. in the area to be whitened by the dentist. A professional tooth cleaning is often recommended before treatment. Preparation of a personalized treatment plan.

The tooth whitening treatment

Light-activated tooth whitening in the dental chair. Gel is applied to the teeth in normally 3 cycles and activated with the whitening lamp. The most effective whitening with immediate results. Treatment duration: approx. 1 hour.

After the tooth whitening

For four hours after treatment, drink only water and avoid anything that could stain a white T-shirt, like coffee, tea, wine, or tobacco.

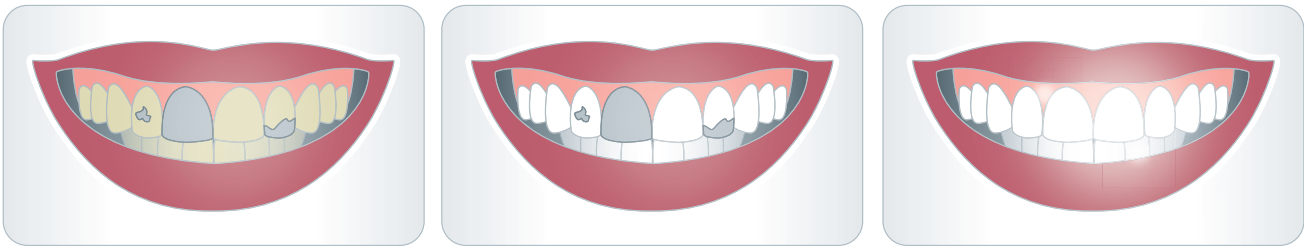

The ideal aftercare:
Whitening Toothpaste
Care & Repair, **LIME-MINT**

flaesh.

Perfect in combination with your treatment

Tooth whitening before dental restoration

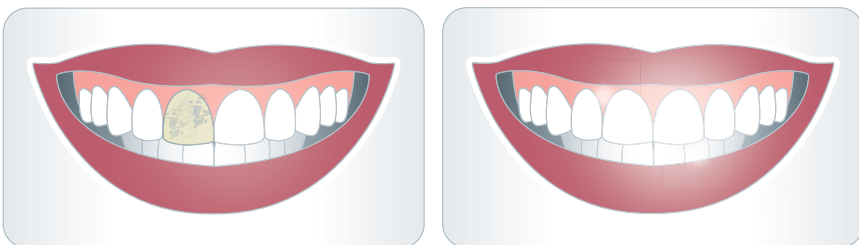

For fillings, inlays, crowns, and implants, whiten the remaining teeth beforehand. Dentures cannot be color-matched later.

Tooth whitening after orthodontic treatment (aligner)

Orthodontic treatment for adults ensures proper tooth alignment. flaesh tooth whitening adds the perfect finishing touch to your smile.

Single tooth whitening

Also suitable for whitening and adjusting individual teeth.

Refresher treatment is possible at any time.
